

Smart Contract Audit Report

Baseline-BToken

Audit Performed By

Fortknox Security
Professional Smart Contract Auditing

July 18, 2024

Table of Contents

Executive Summary	3
Audit Methodology	5
Audit Scope	8
Vulnerability Analysis	9
Contract Privileges Analysis	11
Detailed Findings	8
Recommendations	9
Audit Team	18
Disclaimer & Legal Notice	19
Legal Terms & Usage Rights	20

Executive Summary

Fortknox Security has conducted a comprehensive smart contract security audit for **Baseline-BToken**. Our analysis employs industry-leading methodologies combining automated tools and manual review to ensure the highest level of security assessment.

Security Assessment Overview

Critical Issues

0

Immediate action required. These vulnerabilities can lead to direct loss of funds.

IMPACT: SEVERE FINANCIAL LOSS

High Issues

0

High priority fixes needed. Can lead to significant financial loss.

IMPACT: MAJOR SECURITY RISK

Key Findings Summary

Access Control

Reviewed privilege management, role-based access controls, and administrative functions.

Economic Security

Analyzed token economics, pricing mechanisms, and potential economic exploits.

Logic Validation

Examined business logic implementation, state transitions, and edge cases.

Input Validation

Assessed parameter validation, bounds checking, and input sanitization.

Audit Conclusion

The Baseline-BToken smart contract audit reveals **5 total findings** across various security categories. **No critical or high severity issues were identified.** Our detailed analysis provides specific recommendations for each finding to enhance the overall security posture of the protocol.

Audit Methodology

Our comprehensive audit process combines multiple approaches to ensure thorough coverage of potential security vulnerabilities and code quality issues. We employ both automated analysis tools and manual expert review to achieve maximum security coverage.

Tools & Techniques

Static Analysis

Slither & Mythril for comprehensive code scanning and vulnerability detection

Manual Review

Expert security engineers perform in-depth code analysis and logic verification

Business Logic

Assessment of protocol mechanics, economic models, and edge case handling

Gas Analysis

Optimization review for efficient gas usage and cost-effective operations

Formal Verification

Mathematical proof methods to verify critical contract properties

Symbolic Execution

Advanced analysis techniques to explore all possible execution paths

Review Process & Standards

Review Process

1

Initial Scanning

Automated tools perform preliminary vulnerability detection and code quality assessment

2

Manual Review

Senior security engineers conduct detailed code examination and logic validation

3

Business Logic Testing

Verification of protocol mechanics, economic models, and edge case scenarios

4

Architecture Analysis

Review of system design patterns, dependencies, and integration points

5

Final Documentation

Comprehensive report generation with findings, recommendations, and risk assessment

Severity Classification

Severity	Description	Impact	Action Required
CRITICAL	Direct loss of funds, complete system compromise, or major protocol breakdown	Severe Financial Loss	IMMEDIATE FIX REQUIRED
HIGH	Significant financial loss, major system disruption, or privilege escalation	Major Security Risk	HIGH PRIORITY FIX
MEDIUM	Moderate financial loss, operational issues, or limited system disruption	Moderate Risk	SHOULD BE ADDRESSED
LOW	Minor security concerns that don't directly impact protocol security	Low Risk	CONSIDER ADDRESSING
INFO	Best practice recommendations and informational findings	Quality Enhancement	FOR REFERENCE

Audit Scope

Project Details

PARAMETER	DETAILS
Project Name	Baseline-BToken
Total Issues Found	5
Audit Type	Smart Contract Security Audit
Methodology	Manual Review + Automated Analysis

Files in Scope

This audit covers the smart contract codebase and associated components for Baseline-BToken.

Audit Timeline

- ✓ Audit Duration: 2-3 weeks
- ✓ Initial Review: Automated scanning and preliminary analysis
- ✓ Deep Dive: Manual code review and vulnerability assessment

Vulnerability Analysis

Our comprehensive security analysis uses the Smart Contract Weakness Classification (SWC) registry to identify potential vulnerabilities.

SWC Security Checks

Check ID	Description	Status
SWC-100	Function Default Visibility	PASSED
SWC-101	Integer Overflow and Underflow	PASSED
SWC-102	Outdated Compiler Version	PASSED
SWC-103	Floating Pragma	PASSED
SWC-104	Unchecked Call Return Value	PASSED
SWC-105	Unprotected Ether Withdrawal	PASSED
SWC-106	Unprotected SELFDESTRUCT	PASSED
SWC-107	Reentrancy	PASSED

CHECK ID	DESCRIPTION	STATUS
SWC-108	State Variable Default Visibility	PASSED
SWC-109	Uninitialized Storage Pointer	PASSED
SWC-110	Assert Violation	PASSED
SWC-111	Use of Deprecated Solidity Functions	PASSED
SWC-112	Delegatecall to Untrusted Callee	PASSED
SWC-113	DoS with Failed Call	PASSED
SWC-114	Transaction Order Dependence	PASSED

Contract Privileges Analysis

Understanding contract privileges is crucial for assessing centralization risks and potential attack vectors.

Common Privilege Categories

PRIVILEGE TYPE	RISK LEVEL	DESCRIPTION
Pause/Unpause Contract	High	Ability to halt contract operations
Mint/Burn Tokens	Critical	Control over token supply
Modify Parameters	Medium	Change contract configuration
Withdraw Funds	Critical	Access to contract funds
Upgrade Contract	Critical	Modify contract logic

Mitigation Strategies

- ✓ Implement multi-signature controls
- ✓ Use timelock mechanisms for critical functions
- ✓ Establish governance processes
- ✓ Regular privilege audits and reviews
- ✓ Transparent communication of privilege changes

M-0 | Lack Of Policy Permissions

CATEGORY	SEVERITY	LOCATION	STATUS
Access Control	MEDIUM	BPOOL.v1.sol: 254	Acknowledged

Description

`migrateBToken` function in the BPOOL module is a `permissioned` function and it should be called via policies. However, none of the policies have permission to call this function.

```
migrateBToken  
permissioned
```

Recommendation

Consider which policy is expected to call this function and add the function's selector to the `requestPermissions` process.

```
requestPermissions
```

Resolution

Baseline Team: Acknowledged.

M-1 | Incorrect BPOOL Locked State

CATEGORY	SEVERITY	LOCATION	STATUS
Logical Error	MEDIUM	BPOOL.v1.sol: 75	Resolved

Description

ERC20 features are moved from `BPOOL` to separate `BTOKEN` contract with the current update. However, the `locked` status still remains in the BPOOL contract, in addition to the `BTOKEN` contract, creating an asymmetry.

BPOOL
BTOKEN
locked
BTOKEN

Recommendation

Remove the `locked` from the `BPOOL` and use it only from the `BTOKEN`.

locked
BPOOL
BTOKEN

Resolution

Baseline Team: The issue was resolved

M-2 | Exit Loop Before Borrow Operation

CATEGORY	SEVERITY	LOCATION	STATUS
Logical Error	MEDIUM	Afterburner.sol: 254	Resolved

Description

In the function `_loop`, an early exit occurs if `minimumCollateral` is hit. This is called after the borrow operation. However, if `_bAssetsIn` is too small, the borrow operation could revert as no new principal is transferred out.

```
_loop  
minimumCollateral  
_bAssetsIn
```

Recommendation

The early exit for `minimumCollateral` should be done before the borrow operation.

```
minimumCollateral
```

Resolution

Baseline Team: The issue was resolved

L-0 | Lack Of Validation In setController

CATEGORY	SEVERITY	LOCATION	STATUS
Warning	LOW	Lack Of Validation In setController	Acknowledged

Description

The `SetController` is a critical function that hands control of mint/burn ability to a new address. Given the importance of the function, consider validating the new controller address to avoid handing control to an unintended address.

`SetController`

Recommendation

Validate that `_controller` is not a zero address and consider implementing a two-step handover process.

`_controller`

Resolution

Baseline Team: Acknowledged.

L-1 | Misleading Developer Comments

Category	Severity	Location	Status
Informational	Low	MarketMaking.sol: 281, 513 - LOOPS.v1.sol: 189	Resolved

Description

Comments on the function `drop` and `_decrementSweepTick` indicate that tick will be moved exactly one tick spacing lower. However, with the revised `_getDecrementSweepTick`, it is possible to move the tick by more than one tick spacing.

```
drop
_decrementSweepTick
_getDecrementSweepTick
```

Recommendation

Update developer comments.

Resolution

Baseline Team: The issue was resolved

Summary of Recommendations

Based on our comprehensive audit, we provide the following prioritized recommendations to improve the security posture of Baseline-BToken.

Priority Matrix

Issue ID	Title	Severity	Priority
M-0	Lack Of Policy Permissions	MEDIUM	Medium
M-1	Incorrect BPOOL Locked State	MEDIUM	Medium
M-2	Exit Loop Before Borrow Operation	MEDIUM	Medium
L-0	Lack Of Validation In setController	LOW	Low
L-1	Misleading Developer Comments	LOW	Low

General Security Best Practices

- ✓ Implement comprehensive testing including edge cases
- ✓ Use established security patterns and libraries
- ✓ Conduct regular security audits and code reviews
- ✓ Implement proper access controls and permission systems

Audit Team

Team Credentials

Our audit team combines decades of experience in blockchain security, smart contract development, and cybersecurity. Each team member holds relevant industry certifications and has contributed to multiple successful security audits.

Methodology & Standards

Our audit methodology follows industry best practices and standards:

- ✓ OWASP Smart Contract Security Guidelines
- ✓ SWC Registry Vulnerability Classification
- ✓ NIST Cybersecurity Framework
- ✓ ConsenSys Smart Contract Security Best Practices
- ✓ OpenZeppelin Security Recommendations

Audit Process

This audit was conducted over a comprehensive review period, involving automated analysis, manual code review, and thorough documentation of findings and recommendations.

Disclaimer & Legal Notice

This audit report has been prepared by Fortknox Security for the specified smart contract project. The findings and recommendations are based on the smart contract code available at the time of audit.

Scope Limitations

- ✓ This audit does not guarantee the complete absence of vulnerabilities
- ✓ The audit is limited to the specific version of code reviewed
- ✓ External dependencies and integrations are outside the scope
- ✓ Economic and governance risks are not covered in technical audit
- ✓ Future modifications to the code may introduce new vulnerabilities
- ✓ Market and liquidity risks are not assessed

Liability Statement

Fortknox Security provides this audit report for informational purposes only. We do not provide any warranties, express or implied, regarding:

- ✓ The absolute security of the smart contract
- ✓ The economic viability of the project
- ✓ The legal compliance in any jurisdiction
- ✓ Future performance or behavior of the contract
- ✓ Third-party integrations or dependencies

Legal Terms & Usage Rights

Usage Rights

This audit report may be used by the client for:

- ✓ Public disclosure and transparency
- ✓ Marketing and promotional materials
- ✓ Investor due diligence processes
- ✓ Regulatory compliance documentation
- ✓ Technical documentation and reference
- ✓ Security assessment presentations
- ✓ Community transparency initiatives

Restrictions

The following restrictions apply to this report:

- ✓ Report content may not be modified or altered
- ✓ Fortknox Security branding must remain intact
- ✓ Partial excerpts must maintain context and accuracy
- ✓ Commercial redistribution requires written permission
- ✓ Translation must preserve technical accuracy

Intellectual Property

This report contains proprietary methodologies and analysis techniques developed by Fortknox Security. The format, structure, and analytical approach are protected intellectual property.

Contact Information

For questions regarding this audit report, additional security services, or our audit methodologies, please contact Fortknox Security through our official channels listed below.
